1.0	Management Approval	
1.1 Approving Authority The Tahoe-Truckee Sanitation Agency (T-TSA) COVID-19 Exposure Control Disease Preparedness Response Plan (COVID-19 ECP) must be reviewed a revised as necessary to ensure compliance with applicable regulations. All revisions are documented on the Revision Log (Appendix B).		
	The Tahoe-Truckee Sanitation Agency COVID-19 Exposure Control Plan has been reviewed and approved by the General Manager.	
	50 01 04 21	
	T-TSA General Manager Date	

2.0 Purpose

To reduce the COVID-19 outbreak impact on T-TSA, its workers, and the public, T-TSA is implementing this COVID-19 Exposure Control and Disease Preparedness Response Plan (COVID-19 ECP) to address exposure risks, sources of exposure, routes of transmission, and other unique COVID-19 characteristics to allow workers to safely perform jobs required to keep T-TSA running during the pandemic. The plan implements engineering, administrative, work practice controls, and PPE to meet the provisions in Title 8, CCR §3205.

This plan shall remain in effect until such time as T-TSA leadership formally accepts the Nevada County Public Health Department/State of California/ CDC or other reputable organization findings that the COVID-19 outbreak and associated risks are no longer a public health threat to T-TSA and its workers.

3.0 Compliance & Responsibilities

All T-TSA personnel must follow the approved safe work practices, policies, directives, and regulatory requirements.

3.1 The General Manager

Is responsible for all T-TSA personnel health and safety and has the overall authority and responsibility for ensuring that all COVID-19 ECP provisions are effectively implemented, including holding management and supervisory positions accountable and ensuring funding to operate the Safety Program.

3.2 The Safety Officer

Has the authority and responsibility for:

- Implementing the COVID-19 ECP;
- Revising and amending as necessary to respond to changing workplace conditions and regulations;
- Stopping some or all non-emergency Agency work in cases where the health exposure risks are too great.

Additionally, the Safety Officer must:

General

- Ensure the COVID-19 ECP plan and procedures are fully implemented, relevant, current and effective;
- Monitor hazardous outbreaks using a reputable near real-time data source to identify exposure risks to employees;
- Monitor the COVID-19 ECP for effectiveness, update as needed, and complete the Revision Log (Appendix B).
- o Ensure enough Personal Protective Equipment is available for all workers.

Communication

 When T-TSA leadership or the Safety Officer deem it necessary to protect its worker health, the Safety Officer must take appropriate action in response to the threat; Ensure that COVID cases in the workplace are appropriately communicated to employees and reported to the local health authorities as required.

Training

o Ensure COVID-19 ECP training is scheduled, tracked, and documented to meet T-TSA and Cal/OSHA requirements.

Recordkeeping

Maintain accurate training records.

3.3 **Supervising Personnel**

- Ensure that a reasonable supply of required PPE is available for each worker;
- Inform personnel of current exposure risks as instructed by T-TSA leadership and the Safety Officer;
- Require exposed personnel wear assigned PPE as instructed;
- Whenever possible, limit activities to the minimum level;
- If unable to mitigate COVID-19 exposure risks using PPE or other methods, report the condition to the department head and Safety Officer and immediately stop work or move personnel to lower risk locations.

3.4 **Personnel Must**

- Follow the COVID-19 ECP;
- Participate in safety meetings, tailgates/tailboards and all relevant training;
- Ensure a reasonable PPE supply is available in their work area;
- Inform their supervisor, the Safety Officer, or HR:
 - If suffering from any COVID-19 symptoms;
 - If feeling generally ill;
 - o Have or may have been exposed to persons confirmed, or presumed, COVID-19 infected.

4.0 Communications

Title 8, CCR §3205(c)(1) System for Communicating.

T-TSA shall communicate with personnel frequently on COVID-19 related topics using methods that ensure all personnel are provided relevant, understandable safety information (including translation where needed). Such methods may include:

- Verbal (one-on-one, very small group, etc.);
- Written (e.g. electronic; online written material; video; interactive; etc.);
- Workplace safety and health training, meetings, and tailgate meetings;
- Regularly scheduled safety meetings:
- Online resources and other methods.

4.1 **Communication Topics**

All T-TSA personnel shall receive the most current:

Post-exposure protocol procedures;

COVID-19 Exposure Control and Disease Preparedness Response Plan

- Explanation of the methods and limitations that will prevent or reduce exposure, including engineering controls, administrative or work practice controls, and PPE for their risk level;
- Information on the types, proper use, location, removal, handling, decontamination and disposal of personal protective equipment;
- Explanation of the basis for selection of personal protective equipment;
 - o Procedures to follow for handling and reporting exposure incidents
 - Medical follow-up and testing.

4.2 **Reporting COVID-19 Related Hazards**

T-TSA provides several methods, including anonymous methods, for personnel to report workplace hazards, acts, safety violations, and make safety suggestions without fear of reprisal. Reporting procedures are easily accessible to all personnel.

The Safety Officer:

- Must review all notifications and COVID-19 safety suggestions as soon as possible and take prompt corrective action as appropriate;
- May share hazard reports with the Safety Committee and department managers when appropriate, provided anonymity can be protected.

4.3 Reporting COVID-19 Illness and Symptoms

Employees must report, without fear of reprisal, COVID-19 symptoms, possible COVID-19 exposures, and possible COVID-19 hazards at the workplace.

- Once an employee alerts T-TSA of a medical or other condition putting them at increased COVID-19 illness risk, accommodations appropriate to the risks shall be established and implemented immediately.
- COVID-19 illness and symptoms are subject to confidentiality requirements.

4.4 **COVID-19 Testing**

T-TSA shall provide information about employee access to COVID-19 testing, including the events that require testing, and how and where to receive testing. Additionally, T-TSA shall inform affected employees of the reason for the COVID-19 testing and the possible consequences of a positive test.

- All T-TSA mandated COVID-19 testing will be at no cost to the employee and during work hours.
- T-TSA will provide workers with information on testing locations and availability through employer sponsored health plans (applies to both T-TSA mandated and voluntary testing)

4.5 **COVID-19 Hazards**

T-TSA shall inform employees, other persons, and entities in contact with T-TSA's workplace when there are COVID hazards or exposures while maintaining HIPPA confidentiality requirements for COVID-19 cases.

5.0 **Employee identification and evaluation of COVID-19 hazards**

Title 8, CCR §3205(c)(2) Identification and Evaluation of COVID-19 Hazards.

- T-TSA workers and their authorized representatives may submit COVID-19 hazards they identify and potential ways to mitigate the hazard to the T-TSA Safety Officer following the procedures in IIPP and in Section 4.2.
 - o Each submission shall be promptly evaluated and investigated as directed by the Safety Officer for action and correction.
- T-TSA requires employees to self-screen before reporting to work. Self-Screening generally includes answering "no" to ALL of the following questions:
 - Within last 14 days, have you directly had contact with anyone that had COVID-19? "Contact" is being 6 feet or closer for more than 15 minutes in a 24 hour period with a person, or having direct contact with fluids from a person with COVID-19 (for example, being coughed or sneezed on).
 - Do you have any of these symptoms that are not caused by another condition?
 - Fever or chills
 - Cough
 - Shortness of breath or difficulty breathing
 - Fatigue
 - Muscle or body aches
 - Headache
 - Recent loss of taste or smell
 - Sore throat
 - Congestion
 - Nausea or vomiting
 - Diarrhea
 - Have you had a positive COVID-19 test for active virus in the past 10 days?
 - Within the past 14 days, has a public health or medical professional told you to self-monitor, self-isolate, or self-quarantine because of concerns about COVID-19 infection?
- T-TSA shall conduct a workplace-specific identification of all interactions, areas, activities, processes, equipment, and materials that could potentially expose employees to COVID-19 hazards. Evaluations shall:
 - o Treat all persons, regardless of symptoms or negative COVID-19 test results, as potentially infectious;
 - Identify places and times when people may congregate or come in contact with one another, regardless of whether employees are performing an assigned work task or not:
 - For example: Meetings, trainings, in and around entrances. bathrooms, hallways, aisles, walkways, elevators, break or eating areas, cool-down areas, and waiting areas.

- Include an evaluation of employees' potential workplace exposure to all persons at the workplace or who may enter the workplace, including coworkers, employees of other entities, members of the public, customers or clients, and independent contractors:
 - T-TSA shall consider how employees and other persons enter, leave, and travel through the workplace, in addition to addressing fixed work locations.
- For each T-TSA structure with indoor areas, T-TSA shall maximize the quantity of outdoor air and increase filtration efficiency to the highest level compatible with the existing ventilation system;
- T-TSA shall regularly inspect all work areas to evaluate existing COVID-19
 prevention controls to identify and implement additional or improved controls
 to lower the COVID-19 transmission risk and ensure compliance with the TTSA COVID-19 policies and procedures.

See Example Forms - Appendix F and G for sample forms

6.0 Control Measures

6.1 Physical Distancing

Title 8, CCR §3205(c)(6) Physical Distancing.

- All T-TSA workers, contractors and visitors shall be separated from other persons by at least six feet, except for:
 - Where six feet of separation is not possible while still completing the necessary tasks;
 - o Momentary exposures while persons are in movement.
- T-TSA shall utilize various methods of physical distancing such as:
 - Telework or other remote work arrangements;
 - o Reducing the number of people in an area at once, including visitors;
 - Adding visual cues such as signs and floor markings indicating where employees and others should locate or their travel path;
 - Staggered arrival, departure, work, and break times;
 - o Adjusted work procedures to increase distance between employees.
- When six foot separation is impossible, keep persons as far apart as possible.

6.2 Face Coverings

Title 8, CCR §3205(c)(7) Face Coverings.

T-TSA shall provide face coverings and ensure they are worn over the nose and mouth by employees.

- Face coverings shall be worn:
 - At all times when indoors:
 - Outdoors when less than six feet away from another person;
 - Where required by CDPH or Nevada County Public Health Department orders.
- T-TSA shall ensure face coverings are clean and undamaged;
- Face shields are not a replacement for face coverings, although they may be worn together for additional protection.

The following are exceptions to the face coverings requirement:

- When an employee is alone in a room.
- While eating and drinking at the workplace; employees are at least six feet apart and outside air has been maximized to the extent possible.
- Employees wearing respiratory protection in accordance with Title 8, CCR 5144 or other safety orders.
- Employees who cannot wear face coverings due to a medical or mental health condition or disability, or who are hearing-impaired or communicating with a hearing-impaired person.
- Specific tasks which cannot feasibly be performed with a face covering. This exception is limited to the time period in which such tasks are actually being performed, and the unmasked employee shall be at least six feet away from all other persons unless unmasked employees are tested at least twice weekly for COVID-19.
 - NOTE: Follow current CDPH guidance that identifies examples when wearing a face covering is likely not feasible.
- Employees exempted from wearing face coverings due to a medical condition, mental health condition, or disability shall wear an effective nonrestrictive alternative, such as a face shield with a drape on the bottom, if their condition or disability permits it.
- Any employee not wearing a face covering, face shield with a drape or other
 effective alternative, or respiratory protection, for any reason, shall be at least
 six feet apart from all other persons unless the unmasked employee is tested
 at least twice weekly for COVID-19. COVID-19 testing may not be used as
 an alternative to face coverings when face coverings are otherwise
 required by this section.
- T-TSA shall not prevent any employee from wearing a face covering when not required by this section, unless it would create a safety hazard, such as interfering with the safe operation of equipment.
- T-TSA shall communicate to non-employees the face coverings requirements on their premises using effective means.
- T-TSA's COVID-19 procedures shall minimize employee exposure to COVID-19 hazards from any person not wearing a face covering, including a member of the public through physical distancing or other effective means.

6.3 Other Engineering & Admin Controls & PPE

Title 8, CCR §3205(c)(8) Other Engineering & Admin Controls & PPE

Engineering Controls

- At fixed locations where it is not possible to maintain physical distancing at all times, T-TSA shall install cleanable solid partitions that effectively reduce aerosol transmission between the employee and other persons.
- T-TSA shall maximize the quantity of outside air provided to the extent feasible for buildings with mechanical or natural ventilation, except when:
 - o The Air Quality Index is greater than 100 for any pollutant
 - Opening windows or letting in outdoor air by other means would cause a hazard to employees, for instance from excessive heat or cold.

Administrative Controls

- T-TSA shall implement cleaning/disinfecting procedures that require:
 - Identifying and regularly cleaning and disinfecting frequently touched surfaces and objects, such as doorknobs, elevator buttons, tools, handrails, handles, controls, bathroom surfaces, and steering wheels.
 - T-TSA shall inform employees and authorized employee representatives of cleaning and disinfection protocols, including the planned frequency and scope of regular cleaning and disinfection.
 - Prohibiting sharing personal protective equipment and to the extent feasible, items that employees come in regular physical contact with such as phones, headsets, desks, keyboards, writing materials, instruments, and tools.
 - When it is not feasible to prevent sharing, sharing shall be minimized and such items and equipment shall be disinfected between uses by different people.
 - Sharing of vehicles shall be minimized to the extent feasible, and high touch points (steering wheel, door handles, seatbelt, armrests, shifter, etc.) shall be disinfected between users.
 - Cleaning and disinfection of areas, material, and equipment used by a COVID-19 case during the high-risk exposure period.
 - NOTE: Cleaning and disinfecting must be done in a manner that does not create a hazard to employees.
- T-TSA shall ensure that adequate handwashing facilities or sanitizer stations are available to protect employees from COVID-19 hazards.
- T-TSA encourages and allows time for employee handwashing and provides employees with an effective hand sanitizer. Employees are encouraged to wash their hands for at least 20 seconds each time.
- Provision or use of hand sanitizers with methyl alcohol is prohibited.

Personal Protective Equipment

- T-TSA shall evaluate personal protective equipment to prevent exposure to COVID-19 hazards, such as gloves, goggles, and face shields, and provide such personal protective equipment as needed.
- T-TSA shall evaluate respiratory protection needs following Title 8, CCR §
 5144 when the physical distancing is not feasible or are not maintained.
- T-TSA shall provide and ensure respirator use in accordance with section Title 8, CCR § 5144 when deemed necessary by Cal/OSHA through the Issuance of Order to Take Special Action, following Title 8, CCR § 332.3.
- T-TSA shall provide and ensure eye and respiratory protection use following Title 8, CCR § 5144 when employees are exposed to procedures that may aerosolize potentially infectious material such as saliva or respiratory fluids.

6.4 Exclusion of COVID-19 Cases per Title 8, CCR §3205(c)(10)

Title 8, CCR §3205(c)(10) Exclusion of COVID-19 Cases.

The purpose of this subsection is to limit transmission of COVID-19 in the workplace by keeping active COVID-19 cases out of the workplace. *Exclusion requirements must follow current Cal/OSHA, CDPH, CDC guidance.*

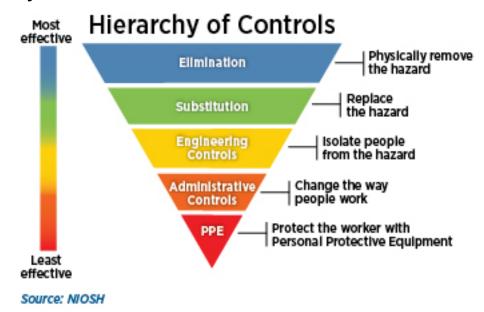

- T-TSA shall ensure that COVID-19 exposures and cases are excluded from the workplace until return-to-work requirements are met including:
 - Any applicable quarantine or isolation period recommended by the CDPH, including in the December 14, 2020 Updated COVID- 19 Quarantine Guidelines; or
 - Any applicable quarantine or isolation period recommended or ordered by a local health officer who has jurisdiction over the workplace;
 - See Section 10.0 for details.
- For employees excluded from work under Title 8, CCR §3205(c)(10), and otherwise able and available to work, T-TSA shall continue and maintain an employee's earnings, seniority, and all other employee rights and benefits, including the employee's right to their former job status, as if the employee had not been removed from their job. T-TSA may use employer-provided employee sick leave benefits for this purpose and consider benefit payments from public sources in determining how to maintain earnings, rights and benefits, where permitted by law and not covered by workers' compensation.
 - EXCEPTION 1: Title 8, CCR §3205(c)(10)(C) does not apply to any time period during which the employee is unable to work for reasons other than protecting persons at the workplace from possible COVID-19 transmission.
 - EXCEPTION 2: Title 8, CCR §3205(c)(10)(C) does not apply where T-TSA demonstrates that the COVID-19 exposure is not work related.
- Title 8, CCR §3205(c)(10) does not limit any other applicable law, employer policy, or collective bargaining agreement that provides greater protections.
- At the time of exclusion, T-TSA shall provide information on benefits described in Title 8, CCR §3205(c)(5) and Title 8, CCR §3205(10)(C) to the employee.

EXCEPTION to Title 8, CCR §3205(10)(C): Employees who have not been excluded or isolated by the Nevada County Public Health Department need not be excluded by T-TSA, if they are temporarily reassigned to work where they do not have contact with other persons until the Title 8, CCR §3205 (c)(11) return-to-work requirements are met.

7.0 Safe Work Practices

When developing and implementing Safe Work Practices and other control protocols, be sure to follow the hierarchy of controls sequence to ensure that the practice will lower the exposure risks without negative unintended consequences.

Hierarchy of Controls

- Eliminate or use substitution to remove or replace the hazard;
- The next level controls are Engineering Controls. These should be used when administrative controls alone do not reduce the risk to an acceptable level. Engineering Controls are typically physical protective changes such as installing windows between the public and workers to prevent a person's airborne particulates from reaching T-TSA personnel;
- Establish Administrative Controls implement work rules that change the way people work to prevent workers from being exposed to the hazard;
- Lastly, require PPE be used in certain situations where Administrative and Engineering Controls do not reduce the exposure risk to an acceptable level. PPE selected may include gloves, goggles, gowns and other protective gear for personnel to wear for specific tasks.

Hygiene & Work Environment

- Physical Distancing Require personnel maintain at least six feet between themselves and other people to reduce the COVID-19 transmission risk whenever feasible and does not create additional hazards.
- Meetings & trainings Require T-TSA meetings & trainings:
 - Be necessary and important and conducted in a virtual space whenever possible;
 - Adhere to strict physical distancing rules;
 - Limit physical attendance to as few people possible;
 - Minimize the length as much as possible;

• Work Scheduling – When possible:

- o Establish staggered work shifts (e.g. shift start and shift end times) for work groups that generally arrive and depart at the same time and share space, such as in a locker room or group staging area to improve the ability to physically distance;
- Have workers be solo contributors with no close contact with others:
- o Use matched personnel groups (e.g. fixed membership teams) to limit a person's contact to as few different people as possible:
- Modify multi-person activities to provide as much distance between workers as possible.

Perform routine environmental cleaning:

- o Routinely clean and disinfect frequently touched surfaces and objects in the workplace, such as workstations, countertops, tables, doorknobs, light switches, countertops, handles, steering wheels, desks, phones, keyboards, toilets, faucets, sinks, etc.;
- o Break areas including all eating surfaces and food prep areas (stoves, microwave, refrigerator, etc.) must be disinfected frequently;
- Provide disposable wipes so that commonly used surfaces (for example, doorknobs, keyboards, remote controls, desks) can be wiped down by employees before each use:
- Cleaning & Disinfecting Tasks:
 - Clean surfaces using soap/water and a household disinfectant;
 - Alcohol solutions use for disinfection must contain at least 70% alcohol to be effective.
 - Properly diluted household bleach will be effective against coronaviruses - Refer to CDC guidance on effective solutions.

Most EPA-registered household disinfectants should be effective.

https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2 Always follow manufacturer instructions on the label to ensure safe and effective use.

- Vehicle Clean-Cabin Rule Whenever possible:
 - o Discard or store potentially contaminated items outside the cabin;
 - o Remove, discard or store potentially contaminated PPE before entering the vehicle's cabin area;
 - Establish a dirty handles rule for all exterior door handles: always consider the outside handles to be dirty and not touch them without first cleaning them; wearing gloves or placing a protective barrier between their hands and the handle or, at a minimum, washing/sanitizing hands after touching handles.
 - Provide Exposure Control Supplies (typical)
 - Disinfectants & hand sanitizer:
 - Rubber/nitrile or equivalent disposable gloves:
 - Antiseptic wipes for interior cleaning (steering wheels, etc.).
 - Trash receptacle (preferably located outside the cabin, but may be located inside if it can be closed);

- Require vehicle high touch points including cabin and exterior handles be cleaned and disinfected between users and prior to each work shift.
- o When sharing a vehicle, all occupants must wear masks at all times.

PPE

 T-TSA prohibits sharing PPE to the extent feasible and when not feasible, all shared PPE must be disinfected before shared.

Employee Health

- Employees should self-screen for COVID-19 prior to arriving at work.
- Emphasize staying home when sick and following respiratory etiquette and hand hygiene by all employees:
 - Place signage near all entrances and in other workplace areas where they are likely to be seen to inform workers and the public:
 - To stay home and not enter the workplace when sick;
 - Follow cough and sneeze etiquette;
 - To follow good hand hygiene practices.
 - o Provide tissues and no-touch disposal receptacles;
 - Require employees clean their hands often by:
 - Hand washing with soap and water for at least 20 seconds;
 - Using an alcohol-based hand sanitizer (60% alcohol minimum).
 - Provide soap and water, alcohol-based hand rubs, or another effective sanitization method in the workplace (refer to Nevada County Public Health Department/ CDC guidelines). Maintain supplies and place sanitizing rubs in multiple locations to encourage hand hygiene;
 - Employees shall cover their noses and mouths with a tissue when coughing or sneezing (or an elbow or shoulder if no tissue is available).
- Sick Employees Require sick employees to stay home:
 - Employees must notify their supervisor and stay home when sick;
 - Require contract companies that provide T-TSA with contract or temporary employees follow the same policies and procedures for preventing sick employees from coming to work sick;
- Separate sick employees Employees who appear to have acute respiratory illness symptoms (i.e. cough, shortness of breath) upon arrival to work or become sick during the day must be separated from other employees and be sent home immediately. Sick employees shall:
 - Wear a face covering when in T-TSA facilities;
 - Cover their noses and mouths with a tissue when coughing or sneezing (or an elbow or shoulder if no tissue is available);
 - Warn others to keep away if approached.
 - Employees who have symptoms of acute respiratory illness must stay home and must not come to work until such time that it is safe to return. See Section 10.0 Return to Work Requirements for specifics
- Employees with sick family members
 - Employees who are well but have sick family members at home with COVID-19 should notify their supervisor/ HR to discuss when to return to work following Section 10.0 Return to Work Requirements;

COVID-19 Exposure Control and Disease Preparedness Response Plan

Travel

- Cancel or reschedule all non-mission-critical travel:
- Workers must use separate vehicles for all local travel whenever possible;
- For regional and wider travel, employees must:
 - Check the CDC's Traveler's Health Notices for the latest guidance and recommendations for each city, state, and country, to be traveled to;
 - Check themselves for symptoms of acute respiratory illness before starting travel and notify their supervisor and stay home if sick;
 - Notify their supervisor and healthcare provider for advice if sick.
- Personnel should coordinate with supervisor before returning from travel.

8.0 Exposure Incidents

In the event of an exposure incident, it is critical to inform exposed personnel quickly and provide medical services in a timely manner to mitigate the severity of illness and limit the spread of infection.

8.1 What constitutes an exposure

A COVID-19 exposure is someone, regardless of face covering status, is within six feet of a COVID-19 case for a cumulative total of 15 minutes or longer in any 24-hour period within or overlapping with the case's high-risk exposure period. This definition applies regardless of the use of face coverings.

8.2 Post exposure protocols

Washing/sanitizing

Immediately after an exposure event, all persons involved must:

- Wash the affected areas immediately;
- Remove PPE and affected clothing as appropriate;
- Discard/wash PPE and clothing as appropriate.

Isolation

The following may be superseded at the direction of the health department

- Isolate the affected from others by distance, in a closed room, or outdoors;
- Send all exposed personnel home to self-guarantine.

See Appendix E - CDC COVID-19 Return to Work Scenarios

Medical Evaluation

Following guidance and direction by medical professionals or the Nevada County Public Health Department, exposed personnel shall be sent for COVID-19 testing and medical treatment as instructed.

See Section 4.4 COVID-19 Testing

Investigation

Investigations for personnel exposed to COVID-19 should refer to the T-TSA, Safety Officer, Nevada County Public Health Department, and CDC guidance for how to conduct a risk assessment of their potential exposure.

See Section 9.0 Investigating and Correction.

Communication & Notification

Within one day, notify personnel, subcontractors and others on-site, of their potential exposure to suspected/confirmed COVID-19 cases at a T-TSA facility.

See Section 9.1 Investigating COVID-19 Cases

Return to Work

Personnel must not return to work until cleared to do so by medical professional, HR, or meeting the specific established criteria.

See Section 10.0 Return to Work Requirements

8.3 Multi-COVID Outbreak

When the Nevada County Public Health Department identifies a T-TSA workgroup, location or other grouping as a Multi-COVID-19 outbreak or when there are three or more COVID-19 cases in an exposed workplace within a 14-day period.

See Appendix C - Multiple COVID-19 Infections and COVID-19 Outbreaks

8.4 Major-COVID Outbreak

When the Nevada County Public Health Department identifies a T-TSA workgroup, location or other grouping as having a Major-COVID-19 outbreak or when there are 20 or more COVID-19 cases in a T-TSA exposed workplace within a 30-day period.

See Appendix D - Major COVID-19 Outbreaks

9.0 Investigating and Correction

9.1 Investigating COVID-19 Cases

Title 8, CCR §3205(c)(3) Investigating and Responding to COVID-19 Cases.

- T-TSA shall investigate COVID-19 cases in the workplace by:
 - Verifying COVID-19 case status;
 - Tracking COVID-19 test results:
 - Tracking COVID-19 symptoms onset;
 - o Identifying and recording COVID-19 cases.
- For workplace COVID-19 cases, T-TSA shall:
 - Collect as much COVID-19 case information as possible:
 - Determine the day/ time the case was last at the workplace;
 - Identify, if possible, the positive COVID-19 test/ diagnosis date;
 - The case person's symptoms onset date (if any experienced).
 - Determine who may have had a COVID-19 exposure.
 - This requires evaluation of the activities of the COVID-19 case and all locations at the workplace which may have been visited by the COVID-19 case during the high-risk exposure period.
 - Give notice of the potential COVID-19 exposure, within one business day, in a way that does not reveal any personal identifying information of the COVID-19 case, to the following:
 - All employees who may have had COVID-19 exposure and their authorized representatives.

- Independent contractors and other employers present at the workplace during the high-risk exposure period.
- Offer COVID-19 testing at no cost to employees during work hours to all employees who had potential COVID-19 exposure in the workplace and provide them with the information on benefits described in Title 8, CCR §3205(c)(5)(B) and (c)(10)(C).
- Investigate whether any workplace conditions could have contributed to the risk of COVID-19 exposure and what could be done to reduce exposure to COVID-19 hazards.
- All employee medical records including personal identifying information on COVID-19 cases or persons with COVID-19 symptoms shall be kept confidential unless redacted for Nevada County Public Health Department, CDPH, Cal/OSHA or NIOSH or as required by law immediately upon request.
 See Example Form - Appendix F: Investigating COVID-19 Cases

9.2 COVID-19 Hazard Correction

Title 8, CCR §3205(c)(4) Correction of COVID-19 Hazards

T-TSA shall correct unsafe or unhealthy conditions, work practices, policies and procedures in a timely manner based on the hazard severity, including: Implementing controls and/or policies and procedures in response to the evaluations conducted under Sections 5.0 and 8.1;

o Implementing the controls required by Section 6.0.

10.0 Return to Work Requirements

Title 8, CCR §3205(c)(11) Return to Work Criteria. California Governor's Executive Order N-84-20

Workers must not return to work until cleared to do so by medical professional, HR, or by meeting the applicable Section 10 criteria. *Return to work conditions may be changed without notice by T-TSA as needed to address COVID-19 hazards or regulatory rule and guidance changes.*

10.1 Workers with confirmed COVID-19 and have COVID-19 symptoms Worker shall not return to work until:

- At least 24 hours have passed since a fever of 100.4 or higher has resolved without the use of fever-reducing medications;
- COVID-19 symptoms have improved; and
- At least 10 days have passed since COVID-19 symptoms appeared.
- A negative COVID-19 test shall not be required to return to work.

10.2 Workers with confirmed COVID-19 but never had COVID-19 symptoms

Worker shall not return to work until a minimum of 10 days have passed since the date of specimen collection of their first positive COVID-19 test.

A negative COVID-19 test shall not be required to return to work.

COVID-19 Exposure Control and Disease Preparedness Response Plan

10.3 Negative or no COVID-19 test but is presenting COVID-19 symptoms

Worker may return to work after meeting the following three conditions:

- At least 10 days since symptoms first appeared have elapsed; and
- At least 24 hours has passed with no fever without the use of fever-reducing medications: and
- Other symptoms of COVID-19 are improving.
 - o Note that the loss of taste and smell may persist for weeks or months after recovery and need not delay return to work.
- A negative COVID-19 test shall not be required to return to work.

10.4 An asymptomatic worker in close contact with COVID-19 case

An asymptomatic worker may discontinue quarantine after Day 10 from the date of last exposure with or without testing.

A negative COVID-19 test shall not be required to return to work.

10.5 **Quarantine/Isolation Order**

If an order to isolate or quarantine an employee is issued by a local or state health official, the employee shall not return to work until the period of isolation or quarantine is completed or the order is lifted.

• If no period was specified, then the period shall be 10 days from the isolation order effective date, or 14 days from when the quarantine order was effective.

10.6 Critical Services Return to Work Exception

If there are no violations of local or state health officer orders for isolation or quarantine, Cal/OSHA may, upon request, allow employees to return to work on the basis that the removal of an employee would create undue risk to a community's health and safety.

In such cases, T-TSA shall develop, implement, and maintain effective control measures to prevent transmission in the workplace including isolating the employee at the workplace as needed. If isolation is not possible, the use of respiratory protection in the workplace is required.

See Appendix E - COVID-19 Return to Work Scenarios

11.0 Training Requirements

Title 8, CCR §3205(c)(5) Training.

T-TSA personnel must be provided training and instruction on the COVID-19 ECP, COVID-19 health risks, COVID-19 outbreak and job-specific safety and health practices prior to working where such exposures are present.

Training and instruction are provided according to the following:

- When the COVID-19 ECP is implemented or significantly updated;
- To supervisors covering the safety and health hazards related to COVID-19 to which personnel under their immediate direction and control may be exposed;
- To personnel on the COVID-19 hazards specific to their job assignment;
- All personnel shall receive frequent reminders (tailgate trainings, email alerts, newsletter articles) whenever the COVID-19 risks are present.

Training shall include:

- Information regarding COVID-19-related benefits to which the employee may be entitled under applicable federal, state, or local laws;
- Facts about COVID-19 as an infectious disease that spreads through the air when an infectious person talks or vocalizes, sneezes, coughs, or exhales;
- That COVID- 19 may be transmitted when a person touches a contaminated object and then touches their eyes, nose, or mouth, although that is less common; and that an infectious person may have no symptoms;
- Methods of physical distancing of at least six feet and the importance of combining physical distancing with the wearing of face coverings;
- The fact that particles containing the virus can travel more than six feet, especially indoors, so physical distancing must be combined with other controls, including face coverings and hand hygiene, to be effective;
- The importance of frequent hand washing with soap and water for at least 20 seconds and using hand sanitizer when access to a sink or hand washing facility is not available, and that hand sanitizer does not work on soiled hands;
- Proper use of face coverings and the fact that face coverings are not respiratory protective equipment;
- COVID-19 symptoms, and the importance of not coming to work and obtaining a COVID-19 test if the employee has COVID-19 symptoms.

12.0 Reporting, recordkeeping, and access

Title 8, CCR §3205(c)(9) Reporting, Recordkeeping & Access

T-TSA shall:

- Report information about COVID-19 cases at the workplace to the Nevada County Public Health Department whenever required by law, and shall provide any related information requested by the Nevada County Public Health Department.
- Report immediately to Cal/OSHA any COVID-19-related serious illnesses or death of an employee occurring in a place of employment or in connection with any employment.
- Maintain records of the steps taken to implement the written COVID-19 Exposure Control Plan.
- Make the written COVID-19 Exposure Control Plan available at the workplace to employees, and to authorized employee representatives.
- T-TSA shall keep a record of and track all COVID-19 cases with the
 employee's name, contact information, occupation, location where the
 employee worked, the date of the last day at the workplace, and the date of a
 positive COVID-19 test. Medical information shall be kept confidential. The
 information shall be made available to employees, authorized employee
 representatives, or as otherwise required by law, with personal identifying
 information removed.

Tahoe-Truckee Sanitation Agency COVID-19 Exposure Control and Disease Preparedness Response Plan

December 31, 2020

Training Records

COVID-19 ECP training records must be kept for COVID-19 outbreak timeframe, plus 1 year minimum and following the T-TSA record retention policy.

OSHA Recordable Incidents

COVID-19 can be a recordable illness if a worker is infected as a result of performing their work-related duties. However, only COVID-19 cases meeting all of the following criteria must be reported:

- The case is a confirmed COVID-19 case:
 - See CDC information on persons under investigation and presumptive positive and laboratory-confirmed COVID-19 cases;
- The case is work-related and it involves one or more of the general recording criteria set forth in Title 8 CCR §14300.7. General Recording Criteria.
 Enter each recordable injury or illness case on the OSHA 300 Log and Form 301

Enter each recordable injury or illness case on the OSHA 300 Log and Form 30° Incident Report within seven calendar days after receiving notice that the injury or illness occurred. In the event of a fatality, report it to OSHA within 8 hours.

Other COVID-19 Related Records

Must be kept for COVID-19 outbreak timeframe, plus 1 year minimum and in accordance with the T-TSA record retention policy.

Appendix A - Definitions & Terminology

Abbreviations

- Cal/OSHA The Division of Occupational Safety and Health
- CDC Centers for Disease Control and Prevention
- CDPH California Department of Public Health
- **ECP** Exposure Control Plan
- **HIPPA** Health Insurance Privacy and Portability Act
- HR Human Resources Department/Human Resources Administrator
- Title 8, CCR § Title 8 California Code of Regulations Section

Terminology

- May Denotes a permission; neither a requirement nor a recommendation.
- Must Imposes an obligation, indicates a necessity to act.
- **Shall** Imposes an obligation, indicates a necessity to act.
- Should Denotes a recommendation.
- Will Denotes that something is required or mandatory but allows the responsible party some discretion as to when, where, and how.

General Definitions

- Administrative Controls Are changes in work policy or procedures to reduce or minimize exposure to a hazard. Require action by the worker or employer.
- Affected Personnel May work where COVID-19 exposure risks are present.
- Close Contact Persons physically separated by approximately 6 feet (2 meters) or less, or a person in the same room of a person with a confirmed or probable COVID-19 infection for a prolonged period of time; or with direct contact with infectious secretions while the person was likely to be infectious.
- Contaminated The presence of potentially infectious materials on a surface or in or on an item.
- Coronavirus Coronaviruses are a large family of viruses which may cause illness in animals or humans. In humans, several coronaviruses are known to cause respiratory infections ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome (MERS) and Severe Acute Respiratory Syndrome (SARS). The most recently discovered coronavirus causes coronavirus disease COVID-19.
- **COVID-19** An infectious disease caused by severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). Common symptoms include fever, cough, and shortness of breath. Muscle pain, sputum production, diarrhea, and sore throat are less common. The name is derived from COronaVIrus Disease 2019.
- COVID-19 Confirmed/Presumptive Positive For the purposes of this policy. this means a person who has had a positive COVID-19 test or has otherwise medically been identified as having COVID-19.

- COVID-19 Case Means a person who:
 - Has a positive COVID-19 test;
 - Is subject to a COVID-19-related order to isolate issued by a local or state health official; or
 - Has died due to COVID-19, as determined by the Nevada County Public Health Department or per inclusion in the COVID-19 county statistics.
 A person is no longer a "COVID-19 case" in this section when a licensed health care professional determines that the person does not have COVID-19, in accordance with recommendations made by the California Department of Public Health (CDPH) or the Nevada County Public Health Department pursuant to authority granted under the Health and Safety Code or Title 17, California Code of Regulations to CDPH.
- COVID-19 Exposure Means being within six feet of a COVID-19 case for a cumulative total of 15 minutes or greater in any 24-hour period within or overlapping with the "high-risk exposure period" defined by this section. This definition applies regardless of the use of face coverings.
- COVID-19 Hazard Means exposure to potentially infectious material that may
 contain SARS-CoV-2, the virus that causes COVID-19. Potentially infectious
 materials include airborne droplets, small particle aerosols, and airborne droplet
 nuclei, which most commonly result from a person or persons exhaling, talking or
 vocalizing, coughing, sneezing, or procedures performed on persons which may
 aerosolize saliva or respiratory tract fluids, among other things. This also
 includes objects or surfaces that may be contaminated with SARS-CoV-2.
- COVID-19 Symptoms Means fever of 100.4 degrees Fahrenheit or higher, chills, cough, shortness of breath or difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, nausea or vomiting, or diarrhea, unless a licensed health care professional determines the symptoms were caused by a known condition not COVID-19.
- COVID-19 Test Means a viral test for SARS-CoV-2 that is:
 - Approved by the United States Food and Drug Administration (FDA) or has an Emergency Use Authorization from the FDA to diagnose current infection with the SARS-CoV-2 virus; and
 - Administered in accordance with the FDA approval or the FDA Emergency Use Authorization as applicable.
- **Decontamination** The use of physical or chemical means to remove, inactivate, or destroy infectious substances on a surface or item to the point where they are no longer capable of transmitting contaminated particles and the surface or item is rendered safe for handling, use or disposal.
- **Disinfectant** diluted household bleach solutions, alcohol solutions with at least 70% alcohol, and most common EPA-registered household disinfectants.
- **Engineering Controls** Involve isolating employees from work-related hazards. In workplaces where they are appropriate, these types of controls reduce exposure to hazards without relying on worker behavior.

- Exposed Workplace Means any work location, working area, worksite, or common area at work used or accessed by a COVID-19 case during the high-risk period, including bathrooms, walkways, hallways, aisles, break or eating areas, and waiting areas. The exposed workplace does not include buildings or facilities not entered by a COVID-19 case.
- Exposure Control Plan A set of directives and procedures that describe exposure control activities and preventative measures that an organization uses to minimize the risk of exposing workers to viruses and other pathogens.
- **Exposure Incident -** A specific event where a worker may be exposed to potentially infectious materials that resulted from work duties.
- Face Covering Means a tightly woven fabric or non-woven material with no visible holes or openings, which covers the nose and mouth.
- Hand Sanitizer Typically an alcohol-based liquid with at least a 60% concentration of alcohol with virus killing properties that is rubbed all over the hands until it dries to help kill viruses and other pathogens when hand washing is not available. The active ingredients in CDC-recommended alcohol-based hand sanitizers inactivate viruses that are genetically related to, and with similar physical properties as, the 2019-nCoV-2 virus.
- **High-Risk Exposure Period -** Means the following time period:
 - For persons who develop COVID-19 symptoms: from two days before they first develop symptoms until ten days after symptoms first appeared, and 24 hours have passed with no fever, without the use of fever-reducing medications, and symptoms have improved; or
 - For persons who test positive who never develop COVID-19 symptoms: from two days before until ten days after the specimen for their first positive test for COVID-19 was collected.
- **Human Resources** Generally referring to the person or group of people tasked with dealing with human resources issues for the organization.
- **Infected** Being exposed to and becoming ill or contagious with a virus or other infectious agent. The invasion of an organism's body tissues by disease-causing agents, their multiplication, and the reaction of host tissues to the infectious agents and the toxins they produce.
 - Potentially Infected A person not known to be suspected, known or confirmed as having a COVID-19 infection.
 - Suspected Infected A person that, based on their recent history such as having been in close contact or direct contact with a COVID-19 infected person, and has a reasonable chance of being infected.
 - Confirmed Infected A person who has been tested for COVID-19 and the test confirmed an infection.
 - Known Infected A person who has been identified as being infected with COVID-19.

- N95 Dust Mask Is a respiratory protective device designed to achieve a very close facial fit and very efficient filtration of airborne particles. When properly worn, the mask blocks at least 95 percent of very small (0.3 micron) test particles. All personnel may voluntarily wear a dust mask and do not need specific training, fit testing or medical evaluations for such use.
- NAICS North American Industry Classification System
- NIOSH The National Institute for Occupational Safety and Health of the U.S. Centers for Disease Control and Prevention. NIOSH tests and approves respirators for use in the workplace.
- Personnel Includes all T-TSA employees, visitors, contractors (on-site), volunteers, etc.
- **Personal Protective Equipment -** Specialized clothing or equipment, such as glasses, goggles, specialized clothing and gloves, worn or used by personnel for protection against a hazard and ensure personal safety in the workplace.
- Physical Distancing also known as Social Distancing. It is a set of non-pharmaceutical interventions or measures taken to prevent the spread of a contagious disease by maintaining a physical distance between people and reducing the number of times people come into close contact with each other. It involves keeping a distance of six feet (two meters) or more from others and avoiding gathering together in large groups.
- Respirator a device worn over the mouth and nose to protect the respiratory
 tract by filtering out dangerous substances (such as dusts or fumes) from inhaled
 air. For the purposes of this regulation, a respirator is considered to be a tightfitting air filtering respirator or SCBA system that may be worn only by those
 approved trained, fit tested, with a current medical evaluation.
- SARS-CoV-2 The virus that causes COVID-19.
- Safe Work Practices Types of administrative controls that include procedures for safe and proper work used to reduce the duration, frequency, or intensity of exposure to a hazard.
- Social Distancing See Physical Distancing

Appendix B - Revision Log

COVID-19 Exposure Control and Disease Preparedness Response Plan Review and Certification Log			
Date	Identify the Sections/Attachments Revised	Initial	
December 31, 2020	Initial Draft	DKF	

Appendix C - Multiple COVID-19 Infections and COVID-19 Outbreaks

Title 8, CCR §3205.1 Multiple COVID-19 Infections and COVID-19 Outbreaks

1.0 SCOPE

Title 8, CCR §3205.1(a) Scope

This applies if the Nevada County Public Health Department has identified this as a COVID-19 outbreak location or when there are three or more COVID-19 cases in an exposed workplace within a 14-day period. The designation shall continue until no new COVID-19 cases are detected in a workplace for a 14-day period.

2.0 Testing

Title 8, CCR §3205.1(b) Testing

- T-TSA shall provide COVID-19 testing to all employees at the exposed workplace except for those not present during the outbreak period;
- COVID-19 testing shall be provided at no cost to employees during employees' working hours;
- COVID-19 testing shall consist of the following:
 - All employees in the exposed workplace shall be tested and then tested again one week later.
 - Negative COVID-19 test results shall not impact the duration of any quarantine period required by the Nevada County Public Health Department.
 - After the first two COVID-19 tests, T-TSA shall provide continuous COVID-19 testing of those at the workplace at least weekly or as recommended by the Nevada County Public Health Department or Cal/OSHA.

3.0 Exclusions of COVID-19 Cases

Title 8, CCR §3205.1(c) Exclusions of COVID-19 Cases

T-TSA shall ensure COVID-19 cases and employees with COVID-19 exposure are excluded from the workplace in accordance with Sections 6.4 and 9.0 and any relevant Nevada County Public Health Department orders.

4.0 Investigation of Workplace COVID-19 Illness

Title 8, CCR §3205.1(d) Investigation of workplace COVID-19 illness

T-TSA shall immediately investigate and determine possible workplace related factors that contributed to the COVID-19 outbreak following Section 8.1.

5.0 COVID-19 Investigation, Review and Hazard Correction

Title 8, CCR §3205.1(e) COVID-19 Investigation, review and hazard correction

- T-TSA shall immediately investigate and determine possible workplace related factors that contributed to the COVID-19 outbreak following Section 8.0;
- In addition to the requirements of Section 5.0 and Section 8.0, T-TSA shall immediately perform a review of potentially relevant COVID-19 policies, procedures, and controls and implement changes as needed to prevent further spread of COVID-19. The investigation and review shall be documented and include:
 - Investigation of new or unabated COVID-19 hazards including leave policies and practices and whether employees are discouraged from remaining home when sick; COVID-19 testing policies; insufficient outdoor air; insufficient air filtration; and lack of physical distancing.
 - The review shall be updated every thirty days that the outbreak continues, in response to new information or to new or previously unrecognized COVID-19 hazards, or when otherwise necessary.
 - T-TSA shall implement changes to reduce the transmission of COVID-19 based on the investigation and required review. T-TSA shall consider moving indoor tasks outdoors or having them performed remotely, increasing outdoor air supply when work is done indoors, improving air filtration, increasing physical distancing as much as possible, respiratory protection, and other applicable controls.

6.0 Notifications to the Nevada County Public Health Department.

Title 8, CCR §3205.1(f) Notifications to the Nevada County Public Health Department

- T-TSA shall contact the Nevada County Public Health Department immediately, but no longer than 48 hours after T-TSA knows, or with diligent inquiry would have known, of three or more COVID-19 cases for guidance on preventing the further spread of COVID-19 within the workplace.
- T-TSA shall provide to the Nevada County Public Health Department the total number of COVID-19 cases and for each COVID-19 case, the name, contact information, occupation, workplace location, business address, the hospitalization and/or fatality status, and NAICS code of the workplace of the COVID-19 case, and any other information requested by the Nevada County Public Health Department. T-TSA shall continue to give notice to the Nevada County Public Health Department of any subsequent COVID-19 cases at the workplace.
- If testing is required, T-TSA shall inform affected employees of the reason for the COVID-19 testing and the possible consequences of a positive test.

COVID-19 Exposure Control and Disease Preparedness Response Plan

Appendix D - Major COVID-19 Outbreaks

Title 8, CCR §3205.2 Major COVID-19 Outbreaks

1.0 SCOPE

Title 8, CCR §3205.1(a) Scope

- This section applies when there are 20 or more COVID-19 cases in a T-TSA exposed workplace within a 30-day period.
- This section shall apply until there are no new COVID-19 cases detected in a workplace for a 14-day period.

2.0 Testing

Title 8, CCR §3205.2(b) Testing

- T-TSA shall provide twice a week COVID-19 testing, or more frequently if recommended by the Nevada County Public Health Department, to all employees present at the exposed workplace during the relevant 30-day period(s) and who remain at the workplace.
- COVID-19 testing shall be provided at no cost to employees during employees' working hours.

3.0 Exclusions of COVID-19 Cases

Title 8, CCR §3205.2(c) Exclusions of COVID-19 Cases

T-TSA shall ensure COVID-19 cases and employees with COVID-19 exposure are excluded from the workplace in accordance with Sections 6.4 and 9.0 and any relevant Nevada County Public Health Department orders.

4.0 Investigation of Workplace COVID-19 Illness

Title 8, CCR §3205.2(d) Investigation of workplace COVID-19 illnesses

T-TSA shall immediately investigate and determine possible workplace related factors that contributed to the COVID-19 outbreak following Section 8.1.

5.0 COVID-19 Hazard Correction

Title 8, CCR §3205.2(e) COVID-19 Hazard Correction

In addition to Section 8.2, T-TSA shall take the following actions:

- In buildings or structures with mechanical ventilation, T-TSA shall filter
 recirculated air with Minimum Efficiency Reporting Value 13 (MERV-13) or
 higher efficiency filters if compatible with the ventilation system. If MERV-13
 or higher filters are not compatible with the ventilation system, T-TSA shall
 use filters with the highest compatible filtering efficiency. T-TSA shall also
 evaluate whether portable or mounted High Efficiency Particulate Air (HEPA)
 filtration units, or other air cleaning systems would reduce the risk of
 transmission and shall implement their use to the degree feasible.
- Determine the need for a respiratory protection program or changes to an existing respiratory protection program under Title 8, CCR § 5144 to address COVID-19 hazards.
- Evaluate whether to halt some or all operations at the workplace until COVID-19 hazards have been corrected.
- Take any other control measures deemed necessary by Cal/OSHA.

Tahoe-Truckee Sanitation Agency COVID-19 Exposure Control and Disease Preparedness Response Plan

December 31, 2020

6.0 Notifications to the Nevada County Public Health Department.

Title 8, CCR §3205.2(f) Notifications to the Nevada County Public Health Department

- T-TSA shall contact the Nevada County Public Health Department immediately, but no longer than 48 hours after T-TSA knows, or with diligent inquiry would have known, of three or more COVID-19 cases for guidance on preventing the further spread of COVID-19 within the workplace.
- T-TSA shall provide to the Nevada County Public Health Department the total number of COVID-19 cases and for each COVID-19 case, the name, contact information, occupation, workplace location, business address, the hospitalization and/or fatality status, and NAICS code of the workplace of the COVID-19 case, and any other information requested by the Nevada County Public Health Department. T-TSA shall continue to give notice to the Nevada County Public Health Department of any subsequent COVID-19 cases at the workplace.
- If testing is required, T-TSA shall inform affected employees of the reason for the COVID-19 testing and the possible consequences of a positive test.

Tahoe-Truckee Sanitation Agency COVID-19 Exposure Control and Disease Preparedness Response Plan

December 31, 2020

Appendix E - CDC COVID-19 Return to Work Scenarios

Always follow CDC/CDPH/Cal/OSHA/Nevada County Public Health Department guidance https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/end-home-isolation.html https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/prevention.html https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/COVID-19/COVID-19-Quarantine.aspx California Governor's Executive Order N-84-20

IMPORTANT! When establishing when COVID-19

exposed/presumed/confirmed workers may return to the workplace, always review the current return-to-work guidance by the CDC/CDPH/Cal/OSHA and the Nevada County Public Health Department as the current return-to-work criteria may be more restrictive than the above guidance.

Scenario 1

Confirmed/ presumed positive COVID-19 case with symptoms

Worker may return to work after meeting the following three conditions:

- At least 10 days since symptoms first appeared have elapsed; and
- At least 24 hours has passed with no fever without the use of fever-reducing medications; and
- Other symptoms of COVID-19 are improving.
 - Note that the loss of taste and smell may persist for weeks or months after recovery and need not delay return to work.

Scenario 2

Confirmed positive COVID-19 case with no symptoms

For confirmed cases with no symptoms, worker may return to work after 10 days have passed since the positive viral test for COVID-19 (date that sample was taken).

Scenario 3

Severely ill with COVID and those with weakened immune systems

Workers may need longer than 10 days and up to 20 days after symptoms first appeared before returning to work. Worker's doctor may work with an infectious disease expert or Nevada County Public Health Department to determine whether testing will be necessary and timeframe before worker may return to work.

Scenario 4

For Anyone Who Has Been Around a Person with COVID-19

Workers that had close contact with someone with COVID-19 may not return to work for 10 days after their last exposure to that person.

Exception: Those meeting the following criteria may return to work:

- Had COVID-19 illness within the previous 3 months; and
- Has fully recovered to the point where they could have returned to work; and
- Remains without COVID-19 symptoms (for example, cough, shortness of breath).

Scenario 5

Close contact with someone with COVID-19 - will NOT have further close contact Worker that had close contact with someone with COVID-19 may not return to work for 10 days after their last exposure to that person.

Exception: Those meeting the following criteria may return to work:

- Had COVID-19 illness within the previous 3 months; and
- Has fully recovered to the point where they could have returned to work; and
- Remains without COVID-19 symptoms (for example, cough, shortness of breath).

Scenario 6

Close contact with someone who has COVID-19 - but lives with the person but can avoid further close contact

Workers that had close contact with someone with COVID-19 may not return to work for 10 days after their last exposure to that person.

Exception: If close contact is made during quarantine (during quarantine contact's quarantine), the quarantine window resets to 10 more days.

Scenario 7

Under guarantine and had additional close contact with someone with COVID-19 Workers that had close contact with someone with COVID-19 may not return to work for 10 days after their last exposure to that person.

Exception: If close contact is made during quarantine (during quarantine contact's quarantine), the quarantine window resets to 10 more days.

Scenario 8

Live with someone who has COVID-19 and cannot avoid close contact

Worker may not return to work while the person is sick, and then must guarantine for 10 days after the person who has COVID-19 meets end of isolation criteria.

Appendix F - Investigating COVID-19 Cases Example COVID Case Investigation Form

All personal identifying information of COVID-19 cases or symptoms will be kept confidential. All COVID-19 testing or related medical services provided by us will be provided in a manner that ensures the confidentiality of employees, with the exception of unredacted information on COVID-19 cases that will be provided immediately upon request to the local health department, CDPH, Cal/OSHA, the National Institute for Occupational Safety and Health (NIOSH), or as otherwise required by law.

All employees' medical records will also be kept confidential and not disclosed or reported without the employee's express written consent to any person within or outside the workplace, with the following exceptions: (1) Unredacted medical records provided to the local health department, CDPH, Cal/OSHA, NIOSH, or as otherwise required by law immediately upon request; and (2) Records that do not contain individually identifiable medical information or from which individually identifiable medical information has been removed.

Date:

Name of person conducting the investigation:

Employee (or non- employee*) name:	Occupation (if non-employee, why they were in the workplace):
Location where employee worked (or non-employee was present in the workplace):	Date investigation was initiated:
Was COVID-19 test offered?	Name(s) of staff involved in the investigation:
Date and time the COVID-19 case was last present in the workplace:	Date of the positive or negative test and/or diagnosis:
Date the case first had one or more COVID-19 symptoms:	Information received regarding COVID-19 test results and onset of symptoms (attach documentation):
Results of the evaluation of the COVID-19 case and all locations at the workplace that may have been visited by the COVID-19 case during the high-risk exposure period, and who may have been exposed (attach additional information):

Appendix H - COVID-19 Hazard Identification Form Example

Workplace Interaction Identification Form			
with one another, regardless of whether employees are perform	ning an assigne	otentially infectious. Particular attention will be paid to areas where people may congregate or come in contact ad work task or not. Consider how personnel enter, leave, and travel through the workplace, in addition to cluding coworkers, employees of other entities, members of the public, customers or clients, and independent	
Agency Name			
Area classification			
Description			
Applies to the following locations (use common name)			
Risk factor	Response	Examples	
Outdoors		Activity happens outside with natural airflow	
Indoor - single occupant with door		Single occupant office space with 4 walls and one door	
Indoor - shared space		Less than 4-walls or has multiple occupants including those coming and going. Example: Several desks in same room with low or no dividers	
HVAC system (filtered)		Area is conditioned by a forced-air HVAC system	
Outside air flow available		Area has windows or other outside-air source	
Max area occupancy (enter #)		Fire code capacity (if unknown, estimated how many can safely be in area)	
Typical occupancy (enter #)		Common/Typical occupancy How many people are typically are here at one time?	
Max occupancy w/COVID distancing (enter #)		Current occupancy limit in place due to COVID, if any.	
Interact with others		Do the people have to directly interact with other people in person.	
Interact with known/assumed COVID cases		Do you have any known COVID cases that could be in this area?	
Can easily maintain distance at all times		Is there enough space that keeping no less that 6' from everyone else is easy to do and does not involve any gymnastics to achieve.	
CanNOT easily maintain distance (short term)		Such as passing in a hall or help lifing something for a moment. The area may have "choke points" but none where people will congregate.	
CanNOT easily maintain distance (long term)		Such as close workstations or a front counter where person-to-person interactions take place.	
Physical/near contact		Tasks that involve two or more working close together for an extended period (more than a few minutes). For example, a vac truck jetting at a manhole.	
Spittle transfer		Direct boldily respiration/ fluids transfer between people such as in a sneeze or cough.	
Breakroom? Do workers eat/drink at this location?		ls this an official breakroom or do people tend to treat it as a breakroom?	
No access to hand washing		If no, this assumes a sink with soap and running water is easily and quickly accessible within a short, easy walk.	
Shared PPE		Do workers share any PPE (respirators, goggles, gloves, traffic vest, etc.)	
Shared items		Keyboard, mouse, wrench, controls, etc.	
Shared surfaces		Desk, counter, lunch room.	
Known third party visitors		Contractors, delivery personnel, etc. who are likely to follow COVID safety measures	
Unknown visitors		General public who may or may not follow COVID safety measures	
Ways to interact			
Distance interaction		Easy to maintain at least a six foot distance to everyone else during activities	
Momentary close interaction		Activities require momentary close interactions	
Extended close interaction		Activities require longer close interactions periods	
Touching/near touching		Handing/receiving objects, team-lifting something heavy.	
Quick Item transfer		Dropping mail on someone's desk while they are sitting at it.	
Passing		Momentary closeness such as when passing in the hallway.	
Strong physical contact		Police arresting someone.	
Existing and/or additiona	I COVID-19	prevention controls, including barriers, partitions and ventilation
